## Carmageddon 2 windows 10 patch

I can't start the game. Carma2\_HW has stopped working -----[symptoms]-----des 7, 8, 8.1, or 10. Give this error Carma2\_HW has stopped working --Unstable/incompatible winmm.dll wrapper causes crashing-----[SOLUTIONS]-----Try deleting and reinstalling --Try restarting PC--Try various compatibility settings on Carma2.exe --Try various compatibility settings on Carma2\_HW.exe --Try various compatibility settings on Carma2\_SW.exe --Try using a different glide wrapper (Credit: Toshiba-3) -- Try moving the folder to a shorter path (like C:\carma2) -- Try the GOG release of Carmageddon 2 -- Try removing some of the extra programs you have run at start up and in the background like anti-viruses and python scripts. (Credit: Toshiba-3)-- Try disabled wrapper by renaming dlls. (Credit: rc2sm)--Try renaming winmm.dll to winmm1.dll (Credit: Blackhand) or get an alternative version here: (Credit: rc2sm)--Try Using the patch described in this YouTube video this repair will have for Windows 10 64bit (Credit: \*KEVY\*) music without unstable winmm wrapper.dll. Use \_inmm.dll. (Credit: Black India) Confirms work on the GOG version, may also work on the steam version. [1] 1. Click here and click on \_inmm.dll Ver. 2.38.2. Extract \_inmm238 installation.zip and run \_inmm238.exe (installation)3. Go to Start -&gt; Find Program Folder \_inmm.dll and click on \_inmm.dll Set4. Go to the Patch tab and drag and drop carma2\_hw.exe from the game folder into the App window, double-click on the Good (launch \_inmm.dll always save original, un patched file with org format so you can change by deleting carma2\_hw.exe and renaming carma2\_hw.org to carma2\_hw.exe)5. Save a part between as \_inmm.ini in the original Carmagdon folder (the folder where carma2\_hw.exe is located.ogg.ogg.ogg.ogg). Do! Now music has to work. If it doesn't work, try setting up the game by carma2\_hw.exe from the game folder instead of clicking on it in your steam library. It is possible that the steam version has a different file structure than the GOG version, so you may have to adjust the paths from Step 5 or just generate \_inmm.ini through the \_inmm.dll setup - \_inmm.ini. You can also try to add ogg files in the method tab - type \*.ogg in the free box in the file type column and select the option in the corresponding row in the playback column - some choices may require additional software installation, such as Winamp.Remember, do not confirm the file from Don't run your steam 2, it made a change in step 4 (and possibly from step 5 or)-----[update]-----\*UPDATE\* 1-6-15Hey all I've not checked on this topic for a while but I wanted to say my copy started working out of blue. I had pulled out of it and I accidentally tried to load it up the other day and it worked!! Unfortunately because I had almost been given so much hope on it, I've been documenting all the software changes I've made since I had these problems. The best I could re-collect I made a few changes to my startup processes because there were things that caused a lot of slowdown. I also had a lot of issues with Python because I was running some Usenet and network server programs. I know at some point I deleted and reinstalled some of those things. If any of you are out there using this kind of software, it could be worth looking at. The only other changes I have made are just basic software updates and Windows Updates. I hope this helps in some way. UPDATE 10-2-15Possible solutions posted in comments. There is no guarantee other than originally posted by \*KEVY\*Here is my fix for Windows 10 x64: UPDATE 9-9-16Rename winmm.dll to winmm1.dllPosted by smrtg1 9 on GOG forums here can try alternative version here: UPDATE 3-14-17Originally posted by Blackhand:Hey, I've found a way to have music without that crashy winmm.dll wrapper. Just use \_inmm.dll, it worked on the GOG version, I guess it might work on the steam version. So:1. Go and click on \_inmm.dll Ver. 2.38.2. Extract \_inmm238 installation.zip and run \_inmm238.exe (installation)3. Go to Start -&gt; All Apps (or anything this episode is named in your version of Windows) -&gt; \_inmm.dll and click on \_inmm.dll Set4. Go to the Patch tab and drag and drop carma2\_hw.exe from the game folder into the App window, double-click on the Good (launch \_inmm.dll always save original, un patched file with org format so you can change by deleting carma2\_hw.exe and renaming carma2\_hw.org to carma2\_hw.exe)5. Save a part between as \_inmm.ini in the original Carmagdon folder (the folder where carma2\_hw.exe is located.ogg.ogg.ogg .ogg.ogg.ogg). If not, try setting up the game by carma2\_hw.exe the game folder instead of clicking on it in your steam library. It is possible that the steam version has a different file structure than the GOG version, so you may have to adjust the paths from Step 5 or just generate \_inmm.ini through the \_inmm.dll setup - \_inmm.ini. You can also try to Off ogg files in the Method tab - type \*.ogg in free box in column column Type and select the option in the corresponding row in the column player - some choices may require additional software installation, such as Winamp.Remember, do not run file verification from your steam library in Carmageddon 2, it will remove the change made in step 4 (and possibly from step 5 or). Key points can't use Alt+Tab ¶ while in-game public information official website (archived) official forums (archived) Carmageddon Wiki GOG.com Community Discussions for Game Series GOG.com Steam Page Support Community Discussions Availability[edit] SafeDisc Retail DRM no longer functions properly in Windows Vista and later (see above for affected versions). Essential improvements[edit] Skip video introduction[edit] Delete or rename video files[3] Go to ldata/CUTSCENE delete or rename mix\_intr.smk Improved lottery distance[edit] edit options.txt[4] Go to file location &lt;path-to-game&gt;configuration. Open Options. TXT (steam) or data. TWT (GOG.com). Find the line containing Yon and change the value from 35.00 to 70.00 or more. Entering the in-game settings menu will take the value. The patch[edit] is the latest official patch 1.2 (US) and official Super Patch v2.0 (DE/ES/FR/IT/UK Blood/UK Zombie) available soggi.org. Game data[edit] file settings(s) location [edit] storage of game data location[edit] storage cloud sync game[edit] video settings[edit] in video settings game.
